Application/Control Number: 10/736,811

Art Unit: 2863

Response to Amendment

1. Applicant's amendment filed 08/02/2005 has been entered and carefully considered.

Claims 1, 2, 4, 6-14, 16, and 18-22 have been amended.

Claims 3, 5, 15, and 17 have been cancelled.

Reasons for Allowance

- 2. Claims 1-2, 4, 6-14, 16, and 18-23 are allowed.
- The following is a statement of reasons for the indication of allowable subject matter:

Please see the previous office action and applicant's argument filed on 08/02//2005.

Regarding claim 1, none of the prior art of record teaches or suggests the combination of a pattern dependent jitter measuring apparatus comprising a pattern generating unit which outputs to a measuring object a data signal, which has a predetermined pattern in which one frame is configured from a predetermined bit length, so as to be synchronized with the clock signal outputted from the clock signal generating unit, wherein the pattern generating unit is configured to output a frame synchronization signal synchronized with data output timing at an arbitrary bit position in one frame of the data signal, and wherein the waveform information acquiring unit is configured to acquire a predetermined number of frames of the waveform information of the data signal to be measured and the clock signal by using the timing when the frame synchronization signal is inputted as a standard timing. It is these limitations as they are

Art Unit: 2863

claimed in the combination with other limitations of claim, which have not been found, taught or suggested in the prior art of record, that make these claims allowable over the prior art.

Regarding claim 13, none of the prior art of record teaches or suggests the combination of a pattern dependent jitter measuring method comprising steps of outputting a frame synchronization signal synchronized with data output timing at an arbitrary bit position in one frame of the data signal, and wherein the acquiring of the waveform information includes acquiring a predetermined number of frames of the waveform information of the data signal to be measured and the clock signal by using a timing when the frame synchronization signal is inputted as a standard timing. It is these limitations as they are claimed in the combination with other limitations of claim, which have not been found, taught or suggested in the prior art of record, that make these claims allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Contact Information

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John H. Le whose telephone number is 571 272 2275. The examiner can normally be reached on 9:00 - 5:30.

Art Unit: 2863

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John E. Barlow can be reached on 571 272 2269. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
